DETAILED ACTION

Amendment

1. Receipt is acknowledged of the amendment filed on March 3, 2004. In the amendment
5 claims 1-3, 5, and 6 were amended. Currently, claims 1-8 remain for examination.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
obviousness rejections set forth in this Office action:

10 (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in
section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are
such that the subject matter as a whole would have been obvious at the time the invention was made to a person
having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the
manner in which the invention was made.

- 15 3. This application currently names joint inventors. In considering patentability of the
claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various
claims was commonly owned at the time any inventions covered therein were made absent any
evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out
20 the inventor and invention dates of each claim that was not commonly owned at the time a later
invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c)
and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee (US
25 6,226,057, "Lee" hereinafter).

Art Unit: 2876

Lee teaches a liquid crystal display comprising a plurality of source bus lines and gate bus lines and a plurality of thin film transistors (see abstract; see figure 2A, 2B). As shown in figure 2A, pixel electrodes and gate line are overlapped (col. 6, lines 31-38). It is also suggested that overlapping area can be made differently to compensate for the difference in capacitance.

5. Although Lee does not explicitly suggest that the area becomes larger as pixels are further away from the signal line, Lee indicates that the overlapping area can be adjusted as desired. Size of the overlapping area is considered result effective variables. One ordinary skill in the art would contemplate adjusting the size of the overlapping area to provide desired effects.

10 Conclusion

I. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Hebiguchi et al. (US 6,707,441); Hara et al. (US 6,046,790); Watanabe et al. (US 6,020,214); Ukita (US 6,310,668); Kawahata (US 6,507,375) disclose LCD-TFT devices. Applicant is respectfully suggested to carefully review these references.
